

PWR Risk Review Coordinator

Requirements Validation Packet

Prepared to validate the current process and proposed application scope with Megan before development begins.

Purpose of this document

This packet is intended for business-process validation. It is not a final technical architecture. Megan should review it and mark anything that is incorrect, missing, or lower priority than shown here.

Source reviewed	What it tells us
Microsoft Form export	Current intake fields, required fields, attendee paths, scheduling request types, legal prerequisites, and final-risk fields.
Power Automate email branch	Major vs Non-Major branching, business-line branching, reusable email content, hardcoded attendees, and duplicated template logic.
Power Automate calendar event	Initial Pre-Risk calendar event shape, default duration, body content, reminder behavior, and current placeholders.
Pre-Risk Meeting Tracker workbook	How Megan actually tracks work: project list, meeting dates/statuses, leads, business line, notes, reviews, CRC/EIC, reschedules, and annual summaries.

1. Executive Summary

We are preparing this correctly, with one important adjustment: the first build should focus on replacing the operational tracking and template-generation pain first, not on sophisticated calendar automation.

- Build a single source of truth for every risk review request.
- Normalize the current form responses into structured project, risk, attendee, meeting, and status data.
- Replace the spreadsheet tracker with a dashboard and detail page.
- Replace duplicated Power Automate branches with configurable rules and reusable templates.
- Generate editable emails and calendar previews in the MVP.
- Add Outlook scheduling automation only after Megan validates the workflow and data model.

Question	Recommendation
Are we building the right thing?	Yes, if the MVP is a tracker + rules + drafts app rather than a calendar-first automation project.
What should Megan validate?	Rules, attendees, statuses, meeting types, prerequisites, and what the tracker means in practice.
Biggest risk	Hardcoding today's Power Automate branches into a new app instead of making the rules and templates configurable.
Best next step	Send this packet to Megan, collect corrections, then convert it into repo documentation and implementation tickets.

2. Current-State Workflow

Step	Current action	System/tool	App implication
1	Requester submits project, risk, attendee, legal, and scheduling information.	Microsoft Form	The app needs an intake form or import path that captures the same fields.
2	Power Automate retrieves response details.	Power Automate	The app needs a normalized request object instead of Microsoft Forms field IDs.
3	Flow classifies request by Major/Non-Major and business line.	Power Automate conditions	The app needs a configurable rules engine.

4	Flow sends Pre-Risk and Formal Risk email templates.	Power Automate + Outlook	The app needs editable email draft generation.
5	Flow creates a Pre-Risk calendar event template.	Power Automate + Outlook	The app needs calendar preview in MVP and Outlook integration later.
6	Megan tracks dates, leads, notes, reviews, reschedules, and outcomes.	Excel tracker	The dashboard and meeting tracker are the central MVP requirement.

3. Readiness Findings

Type	Finding
Keep	The current direction is right: build a process app with a rules engine, not a coded clone of Power Automate.
Tighten	The validation document should explicitly cover tracker fields, legal prerequisites, risk-identification prerequisites, and the calendar/event limitations.
Tighten	The app should separate meeting date from meeting status. The spreadsheet currently mixes dates with text statuses.
Tighten	The app should treat attendees as structured roles with names and emails, not just free-text fields.
Tighten	Outlook automation should be Phase 2 or 3. The MVP should generate preview/draft artifacts and prove the workflow first.
Validate	Megan must confirm thresholds, attendee rules, business-line exceptions, status values, and final-risk prerequisites before build-out.

4. Important Corrections Before Coding

- Do not treat the Power Automate flow as the architecture. Treat it as evidence of business rules and template content.
- Do not store meeting status in the same field as scheduled date. Store scheduled date/time separately from status/outcome.
- Do not hardcode static attendee names directly into templates. Store them as configurable attendee rules.
- Do not require Outlook integration for MVP success. Calendar automation is valuable, but it depends on clean request, attendee, and meeting data first.
- Do not assume the Microsoft Form field IDs are stable. Map them to human-readable internal field names.
- Do not assume all attendee entries are resolvable from free text. The app should eventually support directory lookup and manual corrections.

5. Proposed MVP Scope

ID	Area	Requirement
REQ-01	Request intake	Capture the same information the Microsoft Form captures today, including project, risk triggers, values, business line, EPC prime status, attendees, legal assignment, and target dates.
REQ-02	Single request record	Normalize duplicate form paths into one request record regardless of whether BMCD is EPC prime.
REQ-03	Dashboard	Replace the spreadsheet work queue with a dashboard that shows every active opportunity, status, next action, owner, lead, and key dates.
REQ-04	Rules engine	Classify Major vs Non-Major, business-line category, meeting needs, required attendees, optional attendees, and prerequisite flags.
REQ-05	Meeting tracking	Track Pre-Risk Consult, Pre-Risk Review, Formal Risk Discussion, and Final Risk Review as separate meeting records.
REQ-06	Email drafts	Generate editable Pre-Risk, Formal Risk, Final Risk, reminder, and reschedule email drafts.
REQ-07	Calendar preview	Generate a calendar invite preview before Outlook integration is added.
REQ-08	Audit/history	Maintain status history, notes, meeting reschedule count, and follow-up history.
REQ-09	Admin config	Allow Megan or an admin to maintain templates, static attendees, role rules, status values, and business-line mappings.

6. Not in the First Build

- Automatic calendar optimization across all attendee calendars.

- Automatic sending of emails without Megan review.
- Full replacement of every historical spreadsheet report on day one.
- Complex role-based permissions beyond a simple internal admin/user split.
- Deep integration with CRM or legal systems unless Megan confirms it is required for MVP.

7. Business Rules to Validate

Rule	Condition	System behavior	Needs Megan validation
Major opportunity	Risk trigger includes #1 or #2	Set Major = Yes and use major-opportunity email/attendee rules	Confirm whether only #1 and #2 define major opportunity.
Business-line priority	Business line contains both BESS and Solar	Use BESS + Solar category	Confirm how to handle BESS + Solar + GHI or other multi-line combinations.
Business-line fallback	Business line is Decarb, Nuclear, Mining, or any unhandled combo	Use All Other rules unless configured otherwise	Confirm whether Decarb/Nuclear/Mining need unique rules.
EPC prime attendee path	Is BMcD prime EPC contractor = Yes	Require EPC-prime attendee roles, including CDB Ops Manager and Self-Perform PM	Confirm whether EPC-prime path should always override standard path.
Legal prerequisite	Formal or Final Risk requested	Require RVW # and Attorney; flag/block if missing	Confirm whether the app should block submission or simply warn.
Regional roles	Non-KC opportunity and BMcD Contract Value >= \$10M	Require Regional GP Manager and Regional Risk Manager or N/A	Need a KC/non-KC field or rule source.
Risk ID prerequisite	Pre-Risk requested	Require Risk Identification Meeting status; warn if No or unresolved	Confirm how to treat Scheduled or Other.
Final risk prerequisite	Final Risk requested	Require Formal Risk Discussion Date, Pre-Risk Lead, Formal Risk Lead, Final Risk Target Date	Confirm final risk only occurs after award.
Deliverables reminder	Meeting is scheduled	Track slides and risk register due 24 hours before meeting	Confirm required deliverables and reminder cadence.
Meeting default duration	Create calendar preview	Default Pre-Risk duration to 60 minutes until configured otherwise	Confirm durations for each meeting type.

8. Data Model in Business Terms

Object	Purpose	Examples of fields
Request / Opportunity	The main record for each risk review request.	Client, project, CRM OPP #, values, business line, EPC prime, requester, status, next action.
Risk Trigger	Selected trigger numbers and descriptions.	Trigger #, description, major-opportunity flag.
Attendee	A person or role associated with the request or meeting.	Name, email, role, required/optional, source rule, meeting type.
Meeting	A scheduled or target meeting for the request.	Type, target date, scheduled start/end, status, risk lead, event ID, notes, reschedule count.
Email Draft	Generated but reviewable communication.	Template, recipients, subject, body, status, sent date.
Rule Set	Configurable business logic.	Condition, priority, outputs, active flag.
Template	Reusable content for email/calendar bodies.	Template type, subject pattern, body, applicable business line, active flag.

9. Tracker Replacement Requirements

The Excel workbook is more than a list of submitted forms. It is Megan's operating dashboard. The app should preserve these concepts but make them structured, filterable, and reportable.

Tracker concept	App version
Annual sheets	Dashboard filters by year; no need for separate annual tabs.
Project rows	One request/opportunity record per project or review request.
Date columns	Meeting records with target date, scheduled date/time, and status.
Free-text statuses in date fields	Dedicated status fields with controlled options.
Lead totals	Report counts by Pre-Risk Lead and Formal Risk Lead.
Business-line totals	Report counts by normalized business line.
Notes	Timestamped notes and follow-up history.
Mtgs Rescheduled	Count plus optional reschedule history.

Tracker fields to preserve

Year
Project Name

Organizer / Requester
OPP #
Pre-Risk Consult
Pre-Risk Meeting
Pre-Risk Follow-Up
Slides Received
Risk Triggers
Formal Risk Meeting
Final Risk Meeting
Pre-Risk Lead
Formal Risk Lead
Business Line
Notes
Director Review
Exec Review
CRC Date / EIC
Meetings Rescheduled

10. Email and Calendar Requirements

- Generate Pre-Risk, Formal Risk, and Final Risk drafts from templates.
- Allow Megan to edit subject, body, recipients, optional attendees, risk lead, and dates before sending.
- Store each generated draft against the request for history.
- Calendar preview should include subject, start/end, timezone, required attendees, optional attendees, meeting body, deliverables reminder, and response-requested setting.
- The current calendar action creates a 60-minute busy event using current time plus 60 minutes and includes placeholders for scheduling source and risk lead. The app should replace those placeholders with real values before Outlook integration is enabled.

11. Megan Validation Questions

[] Is the app intended to fully replace Microsoft Forms, or should it initially import form submissions and keep the form as the front door? Integrated. I would like a drop-down menu of employees to populate as the requestor types a name for the role and to pull data from CRM

[] Are risk triggers #1 and #2 the complete definition of a Major Opportunity? “A PWR Major Opportunity is defined as an **offer to sell on an EPC project or Professional Services greater than \$10M.**” This number is the BMcD contract fee (how much BMcD is charging) – not TIC (total installed cost). Although not explained explicitly through the official description, this also includes DBB>\$50M in practice. EPC project in this situation means we are the prime contractor (not OE AKA Owners Engineer.)

[] The 2024 tracker appears to reference DBB >\$5M while the form and newer tracker sheets reference DBB >\$50M. Which threshold is correct historically and going forward? DBB>\$50M TIC is correct

[] Should Decarbonization (now called NES,) Nuclear, and Mining use the generic All Other rules, or do any of them need unique attendee/template logic? Use generic All Other rules

[] How should multi-business-line requests be prioritized when the selection is not just BESS + Solar, such as GHI + BESS? Solar ~~and~~ BESS have additional specific invitees ~~that GHI and other business lines does not. If BESS or Solar is selected, those. Those additional~~ specific invitees should be added

[] Should missing legal information block submission, block scheduling, or simply show an alert? Show an alert to the requestor and require an explanation

[] What exactly should happen when Risk Identification Meeting status is No, Scheduled, or Other? I would like to know the scheduled date. If no, give an alert to the requestor stating this is a required part of the process & have them give an explanation. Other, provide a place for the requestor to explain.

[] Which fields are currently added manually in the tracker after a form submission, and which of those should the app own? All are currently added manually in the tracker. Project name (in Client Name – Project Name form), Organizer (is the requestor), OPP#, list of all risk triggers, business-line, Pre-Risk Mtg can have a date entered. I want all the columns to remain manually editable

[] What are the official status values Megan wants to use instead of free-text values like Indicative, Cancelled, N/A, Not Needed, or Waiting for Client? If there is no specific date (MM/DD/YYYY), Indicative, Cancelled, N/A, Not Needed, or Waiting for Client are all valid statuses.

[] What are the default durations for Pre-Risk Consult, Pre-Risk Review, Formal Risk Discussion, and Final Risk Review? All are 1 hour meetings

[] Which attendees are always required, which are conditional, and which are optional by business line?

Required Attendees for all Formal & Final Risk Reviews:

- Formal Risk Coordinator (assigned by Corporate)
- PWR Risk Coordinator (assigned by PWR Risk Admin)
- Executive-in-Charge
- Business Line Director
- Business Development/Capture Manager
- Project Manager
- Engineering Manager
- Attorney

Risk Trigger Conditional: Required Attendees for EPC Formal & Final Risk Reviews:

- Matt Ralston OR Chad Cotter
- Business Line CDB Operations Manager
- Construction Manager (if applicable)
- Self-Perform Construction Lead(s) (if applicable)

Risk Trigger Conditional: Required Attendees for DBB Formal & Final Risk Reviews:

- Construction Manager (if applicable)
- Self-Perform Construction Lead(s) (if applicable)

Optional Attendees for All Formal & Final Risk Reviews:

- Regional GP Manager (if applicable)
- Regional Risk Manager (if applicable)
- PWR Risk Admin: PWR-RiskExecReviews@burnsmcd.com

Major Opportunities Conditional: Optional Attendees for Major Opportunities Formal & Final Risk Reviews:

- Senior VP & General Manager, PWR: Scott Strawn
- Vice President, Operations: Travis Fucich
- PWR Lead Risk Coordinator: Chris Hamker
- SVP, Energy: Ed Anello & Joe Podrebarac
- COO, Energy: Paul Fischer
- Insurance

Risk Trigger Conditional: Optional Attendees for EPC or DBB Formal & Final Risk Reviews:

- Senior VP of Self-Perform Construction (if applicable): Jeff Allen

- President of Construction (only if EPC TIC>\$30M): Brett Williams
- Matt Ralston or Chad Cotter (only if EPC - opposite of required)
- Facility Security Director (only if EPC): RJ Hope

Business-Line Conditional: Optional Attendees for EPC or DBB Formal & Final Risk Reviews:

- If Solar EPC or DBB add: PWR-RiskSolarEPC@burnsmcd.com
- If BESS EPC or DBB add: PWR-RiskBESSEPC@burnsmcd.com

Required Attendees for all PWR Pre-Risk Reviews:

- Business Line Director
- Project Manager
- Engineering Manager
- Construction Manager (if applicable)

Risk Trigger Conditional: Required Attendees for all EPC & DBB PWR Pre-Risk Reviews:

- CDB Operations Manager
- Self-Perform PM (if applicable)

Optional Attendees for all PWR Pre-Risk Reviews:

- Executive-in-Charge
- Business Development/Capture Manager
- Attorney
- Regional GP Manager (if applicable)
- Regional Risk Manager (if applicable)
- PWR Lead Risk Coordinator: Chris Hamker
- PWR Risk Admin: PWR-RiskExecReviews@burnsmcd.com
- Other:

Business-Line Conditional: Optional Attendees for all Solar and BESS PWR Pre-Risk Reviews:

- If Solar non-EPC or DBB add: PWR-RiskSolar@burnsmcd.com
- If BESS non-EPC or DBB add: PWR-RiskBESS@burnsmcd.com
- If Solar EPC or DBB add: PWR-RiskSolarEPC@burnsmcd.com
- If BESS EPC or DBB add: PWR-RiskBESSEPC@burnsmcd.com

[] Should the app resolve names to email addresses automatically from the company directory? If it helps the app run internally or for calendar invites yes, but I want to see names on the email.

[] Should Megan review and approve every generated email/calendar invite before sending? Email, no – PWR pre-risk review requests should only be sent to Megan and requestor and sent from PWR-RiskExecReviews@burnsmcd.com. Formal Risk Review Requests and Final Risk Review Requests should only be sent to Megan.

Calendar invite, yes: only need a calendar invite for Pre-Risk meetings and it should be organized by PWR-RiskExecReviews@burnsmcd.com

[] What reports would actually help: upcoming meetings, overdue follow-ups, reschedules, reviews by lead, reviews by business line, missing slides/register, or annual totals? reviews by lead, reviews by business line, annual totals

[] What would make this a successful first release even before Outlook calendar automation is added? Clean and consistent outputs keeping the emails looking all the same just with different information based on the various risk-trigger-based attendees and business-line-based attendees. A PWR pre-risk draft calendar invite.

Email templates:

Formal Risk -

Hi Corporate Risk,

Please help schedule the below Pre-Risk for Requestor:

Project Name:
CRM Opp No:
Risk Triggers:
BMCD Projected Fee:
TIC:
RVW #:

Required Attendees:

- Pre-Risk Lead:
- Executive-in-Charge:
- Business-Line Director:
- Matt Ralston OR Chad Cotter (if EPC):
- CDB Operations Manager:
- Business Development/Capture Manager:
- Project Manager:
- Engineering Manager:
- Construction Manager:
- Self-Perform PM (if applicable):
- Attorney:

Optional Attendees:

- SVP & General Manager, PWR: Scott Strawn
- President of Construction (if EPC>\$30M): Brett Williams
- SVP of Self-Perform Construction (if applicable): Jeff Allen
- Vice President, Operations: Travis Fucich
- PWR Lead Risk Coordinator: Chris Hamker
- SVP, Energy: Ed Anello & Joe Podrebarac
- Matt Ralston or Chad Cotter (opposite of above - if EPC):
- COO, Energy: Paul Fischer
- Insurance:
- Regional GP Manager (if applicable):
- Regional Risk Manager (if applicable):
- PWR Risk Admin: PWR-RiskExecReviews
- Other: PWR-RiskBESSEPC

Pre-Risk Date:
Formal Risk Availability:

PWR Pre-Risk:

Hi PWR Risk,

A new risk review request has been submitted:

Project Name:
CRM Opp No:
Risk Triggers:
Business-Line:
BMCD Contract Value:
TIC:
RVW #:

Required Attendees:

- Business Line Director:
- CDB Operations Manager:
- Project Manager:
- Engineering Manager:
- Construction Manager:
- Self-Perform PM (if applicable):

Optional Attendees:

- Executive-in-Charge:
- Business Development/Capture Manager:
- Attorney:
- Regional GP Manager (if applicable):
- Regional Risk Manager (if applicable):
- PWR Lead Risk Coordinator:
- Other:

Has a Risk Identification Meeting occurred?

Pre-Risk Target Date:

Formal Risk Target Date:

Proposal Due Date:

12. Recommended Implementation Plan

Phase	Goal	Deliverables
Phase 0 - Validation	Confirm process and rules with Megan.	Signed-off requirements, final status list, final attendee rules, final template requirements.
Phase 1 - MVP	Replace spreadsheet tracking and template generation.	Intake form, dashboard, request detail page, rules engine, meeting records, email drafts, calendar preview.
Phase 2 - Pilot automation	Connect to Microsoft 365 in a controlled way.	Create Outlook draft emails/events, store event IDs, generate Teams links if approved.
Phase 3 - Scheduling assistant	Reduce calendar coordination burden.	Availability lookup, suggested time slots, approvals, reminders, reporting.

13. First-Release Acceptance Criteria

- ☐ Megan can see all active requests in one dashboard.
- ☐ Megan can open a request and see project, risk, attendee, legal, and scheduling details.
- ☐ The app correctly classifies Major/Non-Major and business-line category for sample requests.
- ☐ The app creates correct editable Pre-Risk and Formal Risk drafts for sample requests.
- ☐ The app tracks Pre-Risk, Formal Risk, and Final Risk dates/statuses separately.
- ☐ The app shows missing prerequisites before scheduling.
- ☐ The app captures notes, follow-ups, leads, and reschedules.
- ☐ Megan agrees the dashboard can replace the day-to-day tracker for new requests.

Appendix A - Risk Trigger Reference

#	Trigger
1	Client project delivery method is Design-Build or EPC, regardless of BMcD role
2	Client project delivery method is Design-Bid-Build with TIC greater than \$50M

3	Project depends on new or untested technology
4	Professional Services contract requires process or performance guarantee
5	New business line or market
6	Replacing existing contractor or consultant
7	Scope includes work on residential property
8	Scope includes review or inspection of third-party work
9	Project includes speculative development
10	Project performed through a Joint Venture or Consortium
11	Project location outside the US 50 states
12	Scope includes construction of third-party design
13	Project located where BMEC is not licensed to work
14	Requires new legal entity or business unit
15	Creates conflict of interest with existing client
16	Services performed with no Limitation of Liability
17	Project purchasing materials or equipment under a PSA, MSA, or similar agreement
18	Project involves digital consulting or services
19	Project funding is Federal grant or tax credit
20	Limited or specific AI use

Bottom line

The build should start only after Megan validates this packet. Once validated, the same content can be converted into repository documentation, database schema, implementation tickets, and Codex prompts.
